Save Point

Visual Theming

QuillFin · Prepared for Logan Young, Save Point Limited · 6 November 2026

QuillFin's real logo, colours and fonts are still to come. Until then a placeholder identity lives in **one token file**, `lib/theme/brand.dart`, so the real brand is a token swap. Everything else reads colours through `context.brand`, so light and dark mode both follow from that file.

- `lib/theme/brand.dart`: the name, fonts, radii and the light and dark `BrandPalette`s (exposed as the `BrandColors` theme extension).
- `lib/theme/theme.dart`: builds the light and dark `ThemeData` from the palette.
- `lib/theme/widgets.dart`: shared branded widgets.
- `lib/layout/breakpoints.dart`: window size classes and the layout helpers (see the per-screen layouts in `quillfin_plan.md` section 5).

Palette (placeholder)

Token	Light	Dark	Use
`ink`	`#12212E`	`#E8EEF2`	text
`inkSoft`	`#4C5C69`	`#A9B6C0`	secondary text, icons
`paper`	`#F7F6F2`	`#0D1821`	page background
`surface`	`#FFFFFF`	`#15232F`	cards, sheets, inputs
`surfaceTint`	`#EEF3F2`	`#1C2E3B`	quiet fills, selection
`line`	`#DCE3E4`	`#2A3D4B`	hairline borders
`fin`	`#0F8A7E`	`#3CC3B3`	primary: buttons, links, selection
`deep`	`#0E3B4F`	`#123447`	hero panels, sign-in brand panel
`quill`	`#F2B33D`	`#F5C561`	highlight: "due", the key call to action
`success` / `info` / `danger`	`#2F9E5C` / `#3B78C4` / `#C2412D`	`#6DD69A` / `#8AB8F0` / `#FF8A73`	status

If a theme wasn't built by `buildAppTheme` (a bare `MaterialApp` in a widget test), `context.brand` falls back to the palette matching the theme's brightness.

Type and shape

- **Outfit** (Medium, SemiBold, Bold) for headings, numbers, buttons and labels; **Inter** (Regular to Bold) for body text. Both are SIL OFL and bundled in `assets/fonts/`, so nothing is fetched at runtime.
- Problem solutions use the platform `monospace` font.
- Shape: 14 px card radius, 12 px controls, 1 px hairline borders, no heavy shadows.

Mark

`QuillFinMark` draws the placeholder mark (a quill nib whose feather sweeps into a fin) in code. The same geometry is in `assets/brand/quillfin-mark.svg`, and `assets/brand/quillfin-app-icon.svg` is a placeholder app icon. `BrandLockup` is the mark plus the wordmark, with an optional "by Save Point".

Widgets in `widgets.dart`

- `BrandCard`, with an optional leading accent bar used to flag due items.
- `PrimaryButton`, with a `highlight` variant in gold.
- `Pill`, `tintedPill()`, `DifficultyPill` and `StatusPill`.
- `StatTile`, `SectionLabel`, `EmptyState` and `RetentionMeter`.
- `QuillFinMark` and `BrandLockup`.

Light and dark

The theme follows the system, with an override in Settings > Appearance (`ThemeController`, saved as `AppSettings.themeMode`).
